Abstract (en)

[origin: WO2016131691A1] The invention relates to a connecting member for connecting two longitudinal members of a bogie frame of a rail vehicle, comprising at least one fastening point for receiving add-on components. In order to damp vibrations which occur and thus prevent oscillation of the system, provision is made according to the invention for the connecting member to comprise at least a first member element (1) with a first member portion and a second member element (2) with a second member portion, wherein the member elements (1,2) are connected to one another in a force-fitting manner by at least two connecting means (5) in such a way that the member portions overlap one another at least in certain portions.
