Abstract (en)

[origin: WO2016131716A1] The invention relates to a method for centering an uncoupled central buffer coupling (2) of a rail vehicle (1), wherein by means of a powered drive (3), the central buffer coupling (2) is arranged in a horizontally pivotable manner, the method comprising the following steps: detecting at least one specific criterion (6) by way of a control device (5); determining a target position of the central buffer coupling (2) by means of the criterion (6); actuating the drive (3) by way of the control device (5) until the central buffer coupling (2) has assumed the target position.
