Abstract (en)

[origin: WO2016132195A1] The invention relates to a construction element comprising at least two joists (2) and at least one interjoist (6) arranged between said joists. According to the invention, each interjoist has a rectangular cross section such that opposite corners of each interjoist are accommodated in corresponding corners of the joists, the joists being made up of one or two sections, the sections of the various joists being at least secured together in pairs by at least one connecting member belonging to the construction element. The invention also relates to a method for erecting such a construction element.
