Abstract (en)
[origin: CA2973046A1] The invention relates to a heater in the form of a heating cartridge (10) for a frame-board formwork element of a formwork (44). The heating cartridge (10) has a heating device (18) and can be mechanically connected to the frame-board formwork element. The mechanical connecting device comprises a first part arranged or formed on the heating cartridge (10) and a second part arranged or formed on the frame-board formwork element. The mechanical connecting device can be designed in particular in the form of a screw connection, a tongue-and-groove connection, a hook-eye connection, a clamping connection or a wedge connection. The heating cartridge (10) preferably has a frame, in the through-opening of which the heating device (18) is at least partially arranged. The first part of the mechanical connecting device is particularly preferably arranged or formed on the frame.
