Abstract (en)

[origin: WO2016131685A1] The invention relates to a tower (1) having a support body to which at least one solar module (3) is attached and having a wind turbine (2) which is arranged in an upper end region (12) of the tower (1) turned away from a base-side underside (10) of the support body and has a vertically aligned rotation axis (20). Good visual integration of the tower into the environment is achieved in that the support body has, between the underside (10) and a top side (11) of the support body opposite the underside (10), a shell surface (3) enclosing the support body (10) at least in part, and in that the shell surface (3) has at least one information area (31, 32).
