Abstract (en)
A surgical device 1 made up of a hollow handle 2 having an elongate insertion portion 3 with a head 5 having jaws 6,7 at its free end, the head 5 being rotatable about a longitudinal axis 8 defined by the elongate insertion portion 3 and separately or simultaneously deflectable with respect to the insertion portion 3 at a joint 9 on the insertion portion 3, rotation and articulation of the head 5 and movement of the jaws 6,7 being effected via a head control mechanism 10 in the handle 2 made up of, firstly, a ring-like head rotation actuator 11, secondly, a separately and independently operable rotatable head deflection control 12 and, thirdly, a separately and independently operable lever-like jaw activator 13 at the handle 2.
