Abstract (en)  
Supporting frame for a raised or technical floor (9), comprising a first and a second main rails (21a, 21b) each comprising a first and a second end (41a, 41b) supportable by supporting columns (11) for the raised floor (9). The frame comprises a set of secondary rails (22a, 22b) comprising at least one secondary rail (22a, 22b) configured to connect the first main rail (21a) to the second main rail (21b) at a predetermined distance from the first and said second end (41a, 41b) of the first and the second main rail (21a, 21b). The first and second main rail (21a, 21b) are parallel each other and shaped so as to define together with the set of secondary rails (22a, 22b) a single supporting surface. The invention further relates to a supporting system for a raised floor and to a method for making the supporting system.
