Abstract (en)
[origin: WO2016137782A1] The present invention provides a nozzle to be used in a refillable fluid exchange between a refill station and a refillable container under hermetic conditions. The use of a secondary port for providing an additive allows customization of the product to the customer's specifications, without long wait times and without otherwise contamination the process. The use of a mixing chamber downstream of the secondary line, preceded by a one way check valve, promotes thorough mixing of two or more constituents as selected by the customer.
