Abstract (en)

[origin: WO2016135637A1] In an continuous automatic punching machine for leather pieces, or sheet material in general, suitable to perform holing, punching, engraving, or the like, the sheet material to be processed moves forward lying on a conveyor belt which carry said material up to a machine processing section between a processing crosspiece with a reciprocating motion to perform a work movement, and an abutment plane. Tool assembly associable to the processing crosspiece of the punching machine comprises two tool holder heads controllable independently of each other to perform displacements in the cross-machine direction, so to increase the versatility of the machine considerably.
