Abstract (en)  
[origin: WO2016135116A1] The invention relates to an actuation plate (10) for a sanitary installation, in particular for a flushing device comprising a concealed flushing cistern, wherein: the actuation plate (10) has a base plate (20), on or in which at least one light source (30) is arranged; the base plate (20) and the at least one light source (30) are covered by a cover (40), in particular a cover plate; push-buttons or push-plates are arranged in the base plate; and the cover plate, in regions of each of the push-buttons or push-plates provided in the base plate, has segments that are designed to correspond to these push-buttons or push-plates, which segments can be moved relative to the surrounding cover such that a bar or lever mechanism that controls the valves of the concealed flushing cistern can be triggered by means of actuating the segments of the cover plate; and wherein the segments of the cover plate are operatively connected to corresponding push-buttons or push-plates, which are formed in the base plate, and wherein a translucent seal is disposed between the cover and the base plate, peripherally of an edge of the base plate.
