Abstract (en)

[origin: WO2016138073A1] On a user equipment that is proximate to a phantom, a method for determining the total radiated power of the user equipment includes, in response to a preset criterion, obtaining a characteristic of the phantom, obtaining a characteristic of an antenna of the user equipment, and obtaining a radio characteristic of the user equipment. The method may also include transmitting the phantom characteristic, the antenna characteristic, and the radio characteristic to a test equipment.
