Abstract (en)

Safety device (1) for the control of the descent during climbing comprising: a frame (2) provided with a groove (13), a first pulley (3), a second pulley (3'), a third pulley (4), whose pin (14) is misaligned with the pin (16) of the first pulley (3) and with the pin (16') of the second pulley (3'), a spring (5) connected to said third pulley (4), a hook (17) for the attachment to a wall; said device (1) being characterised in that said third pulley (4) is mobile, the pin (14) of said third pulley (4) being positioned inside said at least one groove (13) and the pin (14) of said third pulley (4) being translatable inside said at least one groove (13) under the action of the force exerted by said spring (5) and of the weight force exerted by a user of said device.
