Abstract (en)

[origin: WO2016139370A1] The invention relates to a self-expandable endoprosthesis (30) comprising a tubular body (40), said tubular body comprising two open ends, at least one polymer layer and one alloy layer, at least one lateral, so-called puncture opening (45), and at least one element (49) for at least partially blocking said opening, said lateral opening being used to allow penetration of said tubular body and being arranged in the alloy layer, at a pre-defined distance from each of said ends, said blocking element being arranged in the polymer layer.
