Abstract (en)
[origin: WO2016110506A1] The invention relates to an insert part (1) for a dispenser, in particular a dispenser for piece goods, for example a tablet dispenser, with a bottom part (2) and an edge-side insert wall (3), wherein the bottom part (2) has a through-opening (4) and a receiving surface (5) surrounding the through-opening (4), and wherein moreover a wall, preferably the insert wall (3), protrudes above the receiving surface (5). To provide an insert part that can be easily introduced into a dispenser and permits advantageous delivery of the material to be dispensed, the invention proposes that the bottom part (2) has, to the rear of the receiving surface (5), one or more feet (6) extending substantially at right angles to the bottom part (2), wherein one foot or each foot (6), except for its transition into the bottom part (2), leaves free access to the whole bottom part (2), such that, even if there is only one through-opening (4) formed, the latter is accessible from the entire space on the underside of the bottom part (2).
