Abstract (en)
[origin: WO2016139345A1] The hotmelt adhesive composition of the invention comprises at least one polyolefin polymer (P) which is solid at 25 °C and is preferably a thermoplastic poly- α -olefin and more preferably an atactic poly- α -olefin (APAO), at least one polyolefin resin (PH) which is liquid at 25 °C and is preferably based on polyisobutylene, and optionally at least one polyolefin wax (PW) which is preferably a maleic anhydride-grafted polyolefin wax and more preferably a maleic anhydride-grafted polypropylene or polyethylene wax. The hotmelt adhesive composition of the invention is notable not only for high intrinsic tack and effective adhesion to low-energy surfaces but also for advantageously high UV integrity.
