Abstract (en)  
[origin: WO2016139420A1] The invention relates to an assembly (1) for the fluidic control of a valve (100) comprising at least three ports, especially for a motor vehicle, the assembly (1) comprising: a moveable dosing body (12) arranged so as to selectively open or close a first (2) of the three ports; a moveable switching body (10) arranged so as to selectively close a second (9) or a third (11) of the three ports; and a device (15) for actuating the two bodies (10, 12), said actuating device comprising a regulating device (200) arranged so as to regulate the closing position of the dosing body when said dosing body is in an idle position.
