Abstract (en)

[origin: WO2016140655A1] The present invention provides an optical 3D stereoscopic glasses (5) comprising a housing (7), a left lens assembly (5L) and a right lens assembly (5R) wherein the lens assemblies (5L, 5R) use refraction to create one of the following viewing modes: positive parallax hyperstereo viewing mode, positive parallax hypostereo viewing mode, negative parallax hyperstereo viewing mode, and negative parallax hypostereo viewing mode, which can causes a viewer to perceive 3D stereoscopic vision of a 2D image shown on a planar screen.
