Abstract (en)

[origin: WO2016102889A1] The invention relates to a method for controlling access to at least one function of a motor vehicle (10), comprising:  
- an action step during which an electronic control unit (11) on board the motor vehicle detects an interaction of a user with the motor vehicle, - a verification step during which the electronic control unit verifies that the user is authorised to access said function, and - an authorisation step during which the electronic control unit authorises access to said function. According to the invention, said verification step comprises sending of a query message by said electronic control unit to a mobile terminal (20) carried by the user or by a person accompanying the user, and said authorisation step is only implemented if, in response to the query message, the electronic control unit receives an access-right validation message from the mobile terminal.
