Abstract (en)
[origin: WO2016142286A1] The invention relates to a connection device for detachably connecting electrical connections, for example between a secondary battery and an electrical machine tool or between a secondary battery and a charging device. The connection device contains a carrier unit and at least one jack that can be connected to the carrier unit. The invention also relates to a jack as a component of and for connection to a connection device. The invention further relates to a carrier unit as a component of a connection device and for receiving at least one jack.
