Abstract (en)

[origin: EP3266331A1] A pressure-operated closure device (1), comprising: - a female element (2) in which a cavity (3) is formed, - a male element (4), which comprises a locking body (5) that is configured to be inserted into such cavity (3), - a first complementary element (6) fixed to the female element (2) so as to retain a first flap (7) of a fabric, - a second complementary element (8) configured to be fixed to the male element (4) so as to retain a second flap (9) of a fabric. The peculiarity of the invention consists in that it comprises a fixing element (10) which comprises a cap (11), which is visible through the cavity (3) of the female element (2), and fixing means (12). The cap (11) retains the female element (2), while the fixing means (12) fix the cap (11) and the female element (2) to the first complementary element (6).
