Abstract (en)

[origin: CA2972301A1] The invention relates to a corner deflection means (10) of a fitting (5) for a window casement (2) or a door leaf (2), for insertion into a C-shaped casement/leaf groove (7) in the rebate of a frame profile (6) of the casement/leaf (2), having a first corner limb (49) and a second corner limb (50), which runs at right angles to the first corner limb (49), wherein a groove (54) for a limb (20) of the casement/leaf groove (7), said limb groove having an undercut (53), is provided on a first longitudinal side (52) of the first corner limb (49) and/or of the second corner limb (50). The invention makes provision for that region of the second longitudinal aide (55) of the first and/or second corner limb (49, 50) which is located opposite the undercut (53) of the first longitudinal side (52) to be undercut-free, and for the second longitudinal side (55) to have provided on it at least one securing means (56), which can be moved relative to the second longitudinal side (55) between a securing position and a disengagement position.
