Abstract (en)

[origin: WO2016148624A1] The present invention relates to a bicycle support and packaging structure (100) comprising a support or carrier structure (30) being adapted to directly or indirectly carry roller wheels (69,69), a handlebar adapter arrangement (20) fixedly or demountably connectable to said support or carrier structure (30) and being adapted to be releasably connectable to a fork tube of a bicycle front fork. It also comprises a saddle holder (10) fixedly or demountably connectable to said support or carrier structure (30), and being adapted to securably and releasably receive a saddle (65) of a bicycle in an upside down position. It further comprises mounting elements (12,22) allowing the handlebar adapter arrangement (20) and the saddle holder (10) to be adjustably connectable or connected to said support or carrier structure (30) such that the distance between the saddle holder (10) and the handlebar adapter arrangement (20) is adjustable to allow for mounting of bicycles or bicycle frames of different sizes or dimensions.
