Abstract (en)
[origin: WO2016141419A1] An apparatus allowing a user to adjust a chair, the apparatus comprising: two or more chair parameter adjustment mechanisms, each chair parameter adjustment mechanism configured to allow adjustment of a separate chair parameter, two or more cams, each cam configured to actuate one of the two or more chair parameter adjustment mechanisms, and a mechanical coupling between the two or more cams, wherein the apparatus is configured such that each of the two or more chair parameter adjustment mechanisms is independently actuatable by the two or more cams.
