Abstract (en)

[origin: WO2016142618A1] The invention relates to a device (1) for conveying a biopharmaceutical fluid (2), comprising an inner bag (3) forming an inner chamber (6) suitable and intended for receiving a biopharmaceutical fluid (2), an outer container (4) comprising an outer receptacle (13), the outer receptacle (13) comprising a wall (14) forming an outer chamber (15), an expandable protection element (16) that is provided at least in part between the outer receptacle (13) and the inner bag (3) and is suitable for receiving the inner bag (3), the expandable protection element (16) being suitable for expanding in volume when in an expanded state in order to fit between the outer receptacle (13) and the inner bag (3), the expandable protection element (16) surrounding the inner bag (3) and filling the space between the wall (14) of the outer receptacle (13) and the inner bag (3) when in the expanded state.
