Abstract (en)

[origin: WO2016142418A1] The invention relates to, inter alia, a method for producing reeds (9), wherein strip- or band-shaped components (1) are joined together at a determined distance (A) in the width direction (B) of the reed (9) to form the lamellae (1) of the reed (9). It is considered novel that, in this way, at least one of the strip- or band-shaped components (1) is provided with an application of a predetermined amount (10-18) of at least one viscose material on their end faces (8) facing the width direction (B) of the reed (9), in particular in the end regions (E) thereof, and subsequently joined together. The invention also relates to a device (30) for producing reeds (9), and to a reed (9) produced using the method according to the invention.
