Abstract (en)

[origin: WO2016146322A1] The invention relates to a method for operating a washing machine 1, comprising a container 2, a drum 3 for receiving items of laundry 4, a drive motor 5 for the drum 3, an impedance sensor 9 in the container 2 for measuring an impedance signal as a function of a composition of an aqueous liquid 7 in the container 2, and a control device 8, wherein, subsequent to a washing phase, the detergent concentration cten in the rinsing liquid 7 is monitored during the rinsing phase by the impedance sensor 9, and wherein the temporal increase in the detergent concentration cten is evaluated with regard to the further configuration of the rinsing phase. The invention further relates to a washing machine 1 suitable for carrying out the method.
