Abstract (en)

[origin: WO2016142098A1] The invention relates to a system for the release control of a parking space for a motor vehicle, which system comprises an electrical charging device for a motor vehicle having an electrical driving energy store, which electrical charging device is installed in the region of the parking space, a device for determining if the charging system is in operation, and a processing device for releasing the parking space for use by a motor vehicle having an electrical driving energy store if the charging system is not connected to a motor vehicle. In addition, a sensor for determining if a motor vehicle is located in the parking space is provided and the processing device is designed to release the parking space only if there is no motor vehicle in the parking space.
