Abstract (en)

A toy top includes a shaft unit and a body into which a slot to which a fork of a launcher is to be inserted is formed concentrically with a shaft axis. The body comprises a lock receiver which is disposed in an end of a slot, and which is to be locked by a locking part of the fork to be inserted into the slot. A spinning force is applied by means of rotation of the fork of the launcher in a state in which the fork is slid inside the slot toward the end beforehand so that the lock receiver is locked by the locking part at a previously-set locking position. Locking positions are defined respectively at opposite ends of the slot. The lock receiver is movable to and from the locking positions.
