Abstract (en)
The disclosure relates to a flush toilet that includes a toilet bowl portion having first and second water discharge ports, a water supply unit that supplies cleaning water to the first and second water discharge ports, and a drain pipe for discharging retained water in the toilet bowl portion. The second water discharge port discharges water toward a rear region of the toilet bowl portion to form a second stream of water, and the first water discharge port is provided more forward than the second water discharge port in a direction of the second stream of water and discharges water toward an upper portion of the toilet bowl portion to form a first stream of water that swirls in a circumferential direction. An opening in the second water discharge port is located higher than an opening in the first water discharge port.
