Abstract (en)

[origin: CA2987367A1] The invention relates to a shoe (1), in particular a pump, high heel shoe, or stiletto, having an insole (3) and a heel (2), wherein in the heel (2) and/or in the insole (3), in particular in the heel and/or the ball region, at least one damping element (5, 5', 5a, 5b, 5c, 5c') is integrated. The invention is characterized in that the damping element has a shore d hardness in the range of 28-33, a modulus of elasticity in the range of 28-38 MPa, and a tensile stress of 9-11 at 600% elongation. In this way, a shoe is realized that is elegantly fashioned and can be provided with a high-quality design without having to compromise on comfort and convenience.
