Abstract (en)  
[origin: WO2016147008A1] The present disclosure is based upon the identification of a number of antigens derived from species of the genus Psoroptes, which can be used to raise immune responses in animals – particularly those animals susceptible or predisposed to infection/infestation by (or with) one or more Psoroptes species. The antigens provided may be exploited to provide compositions for raising protective immune responses in animals and as vaccines.
