Abstract (en)

[origin: WO2016146233A1] The invention relates to a points transport vehicle comprising a vehicle frame (2) on which a loading platform (5), having a loading level (12) and provided for joining with a set of points (9), is secured such that it can swivel about a swivel axis (6) running in the longitudinal direction of the vehicle, and connected to drives (7) for swivelling. A securing device (15) for joining the set of points (9) with the loading platform (5) is formed by a securing beam (16) which can be moved by a drive (19) in the longitudinal direction of the vehicle on the loading level (12) relative to the loading platform (5), and which is mounted on same by longitudinal guides (18), said securing beam having a longitudinal direction (17) of the beam running perpendicular to the longitudinal direction of the vehicle. A respective securing hook (22, 24), which can be moved in the longitudinal direction of the beam relative to same, is provided on two longitudinal ends (20, 21) of the securing beam (16) arranged at a distance from one another in the longitudinal direction of the beam.
