Abstract (en)

[origin: WO2016145469A1] The invention relates to a device for terminating a bottom section (2) having a slab or stone cladding (3) comprising a securing leg (1) running parallel to the bottom, a termination leg (6) which protrudes from the securing leg (1) and is bent back in a folded manner at the end (9) opposite the fastening leg (1), and a U-shaped slip-on profile (10) which can be slipped onto this termination leg (6). In order to enable a simple run-off of large amounts of water, it is proposed that a bar (7) is arranged between the securing leg (1) and the termination leg (6), sloping away from the fastening leg (1) and forming a gutter together with the termination leg (6).
