Abstract (en)

[origin: WO2016146272A1] The invention relates to a holding element (4) for a door or window handle that can be mounted on a receiving opening of a window frame (1), a door leaf or the like, having a base body (5) with a bearing surface (6) for bearing on a visible side (25) or an inner side (26), which faces the frame or door leaf interior, of a wall (19) of a window frame (1), door leaf or the like, a receiving body (10, 12) which is rotatably mounted in the base body (5) perpendicularly to the bearing surface (6) and has a bearing opening (14) for receiving and bearing a polygon (3) which is fixed in a handle neck (21) of the door or window handle (2) and projects therefrom, wherein a lateral surface (23) of the base body (5) has at least one aperture (24) in which a clamping element (7) is mounted, wherein the at least one clamping element (7) can be moved from a mounting position, in which the clamping element (7) lies in the aperture (24) in the lateral surface (23) of the base body (5), into a working position, in which the clamping element (7) protrudes radially outward from the aperture (24) in the lateral surface (23) of the base body (5), wherein, in the working position, the at least one clamping element (7) bears on a side, opposite the bearing surface (6) of the base body (5), of the wall (19) of the window frame (1), door leaf or the like.
