Abstract (en)  
[origin: WO2016146945A1] The invention relates to a system (100) for producing energy or torque, comprising: a generator designed so as to generate energy or torque from a gas introduced at an admission of the generator; at least two compressors (101, 102) for compressing the gas at the admission of the generator; and a pipeline system (103) in which the pipes (101a, 102a, 101b, 102b, Ce, Cs) are designed such that they can be opened or closed in order to selectively place said compressors (101, 102) in series or in parallel.
