Abstract (en)

[origin: WO2016146242A1] The invention relates to a release device (1) for actuating a trigger lever (2) of a weapon, wherein the trigger lever (2) is swivelably mounted, comprising an actuating means (10), wherein a shot can be released by swivelling the trigger lever (2), wherein the actuating means (10) cooperates in a functionally effective manner with the trigger lever (2). The weapon can be made such that it can be operated remotely, wherein oscillations and vibrations of the actuating means (10) can be reduced and the precision of the weapon can be increased, in that the actuating means (10) has an infinite control curve (11), wherein the actuating means (10) can be driven in a rotatory manner by a drive, wherein the trigger lever (2) cooperates with the control curve (11) by means of a guide means (12).
