Abstract (en)

[origin: EP3272235A1] The present invention is directed to a pouch (1) for tobacco with at least two compartments, the pouch comprising a first flexible sheet part (3) forming a pouch front wall and a second flexible sheet part (2) forming a pouch back wall, wherein pouch front wall and pouch back wall are sealed together along opposing side edges of the pouch by first and second pouch side seals (12, 13), respectively; and a first compartment (8) defined by the pouch back wall, the pouch front wall, the first and the second pouch side seals; wherein at least one of the first and second flexible sheet part comprises or consists of a layered material (7) with at least a first layer (5) and a second layer (6), the first layer comprising a tongue (4) of extra material which has no corresponding counterpart in the second layer; and the pouch further comprising a second compartment formed by folding the tongue of extra material against a part of the first layer of the layered material and by sealing opposing tongue side edges by first and second tongue side seals (14, 15).
