Abstract (en)
The device is intended to be positioned horizontally, suspended from the ceiling, in correspondence with the vertical of the lines delimiting the parking spaces, such that the horizontal elements determine between the adjacent parking spaces separating, as well as protecting means so as to avoid damage produced upon impact of the opening doors of a vehicle into the adjacent one, since the doors will impact directly onto said suspended horizontal elements, these being protected by a damping sheathing made of rubber or the like, and including means to prevent these being caught up in the reaview mirrors of the vehicle, as well as independence from the suspending means for these not to break.
