Abstract (en)
The present invention refers to a modular fence structure which comprises a plurality of uprights (2), constituted by metal tubular bodies, adapted to support a plurality of transverse containment elements (3,4,6,8,9,10,19). The particular feature of the present finding lies in the fact that the structure comprises at least one connection and support element (20,200) of said at least one upright for the connection to the ground.
