Abstract (en)

[origin: WO2016150515A1] A hand-held cutting device (20) may include a working assembly (10), a power assembly (12), an elongated member (14), a control assembly (18), and an orientation adjustment assembly (16). The working assembly may include an electric motor (24) and may be positionable in a first orientation or a second orientation. The power assembly may include an electric power source (30), and an elongated member may extend between the working assembly and power assembly. The control assembly may be configured for selectively providing power from the power assembly to the working assembly via the electric motor. The orientation adjustment assembly may be disposed at a portion of the elongated member and may comprise a locked state in which the working assembly is fixed in the first orientation or the second orientation, and an unlocked state in which the working assembly is rotatable about a longitudinal axis defined by the elongated member between the first orientation and the second orientation.
