Abstract (en)
[origin: WO2016150574A1] The invention relates to a method for loading a profile (P1) for a mobile communication subscription from a data processing server (SM-DP) into a subscriber identity module (eUICC), having the following steps: a) providing a profile (P1) in the data processing server (SM-DP); b) generating an individual executable program code module (BLOB) of the profile (P1) provided in step a), said module being designed such that the profile (P1) is installed into the subscriber identity module (eUICC) by executing the executable program code module (BLOB); and c) loading the individual executable program code module (BLOB) into the subscriber identity module (eUICC). The invention further relates to a method for installing a profile (P1) loaded according to claim 1 into the subscriber identity module (eUICC), having the following steps: d) transmitting an APDU command from the data processing server (SM-SP) to the subscriber identity module (eUICC); and e) in response to receiving the APDU command in the subscriber identity module (eUICC), executing the executable program code module (BLOB) and installing the profile (P1) into the subscriber identity module (eUICC) by means of the execution of the program code module.
