Abstract (en)
[origin: WO2018019607A1] A liquid dispenser (10) for discharging pharmaceutical or cosmetic liquids, in particular in stick form, is known. The liquid dispenser (10) has a liquid store (24) for holding the liquid before discharge and a discharge opening (72) for discharging the liquid. The liquid dispenser also has a pumping device (62) having an actuation surface (64) for manual actuation of the pumping device (62), by means of which liquid can be conveyed from the liquid store to the discharge opening. According to the invention, the liquid store (24) is provided within an exchangeable container unit (20), which can be coupled to and uncoupled from a main unit (60), which comprises the pumping device (62) and the discharge opening (72). A coupling device (30) is provided for the exchangeable coupling of the container unit (20) to the main unit (60), by means of which coupling device the container unit (20) can be alternately coupled to the main unit and released from the main unit by pressing on the main unit (60). The coupling device (30) has two coupling partial devices (32, 34), wherein one coupling partial device (32) is provided on the container unit (20) and one coupling partial device (34) is provided on the main unit (60).
