Abstract (en)
[origin: WO2016155981A1] The invention relates to a radial press with a base structure, a pressing tool accommodated therein and a drive unit, wherein the pressing tool comprises a number of base jaws which are arranged about a press axis (1) and can be moved by the drive unit towards or away from the press axis in a synchronous manner and radially in relation to said press axis, and wherein substantially wedge-shaped press jaw heads (2) can be exchangeably attached to the base jaws. A plurality of press jaw head sets is stored in an associated magazine, said press jaw head sets being adjusted to different press diameters The press jaw heads (2) have two markings (8) on at least one axial end side (7) directly adjacent to both wedge surfaces (6). In addition, the two respective opposing markings (8) of two neighbouring press jaw heads (2) are aligned with one another. Markings (8) that are different from one another are provided for different press jaw head sets.
