Abstract (en)

[origin: WO2016156419A1] The invention relates to a bag (1) for sealingly packaging components, which includes: a flexible body (10) defining an inside space, including a communication opening (12) and a side wall (13) including a plurality of strips (130) folded against one another; and a joining device (14) which can selectively open or close the communication opening, and is shaped so as to be mounted on an enclosure to allow sealed communication between an inner cavity of the enclosure and the inside space of the bag, the bag being characterised in that at least one fold (131) made up of two strips opposite one another is detachably connected to at least one other fold (131).
