Abstract (en)
[origin: CN107531388A] A method for managing a product delivery process, according to one embodiment, includes: receiving status information from one or more product containers, wherein the status information includes conditions of each of the one or more product containers; determining preferred ranges for the conditions of each of the one or more product containers based on a product stored in each of the one or more product containers; determining whether the received conditions from the one or more product containers are within the preferred ranges; and sending a command in response to determining that at least one of the received conditions is outside the determined preferred range.
