Abstract (en)

[origin: WO2016155784A1] The present invention relates to a household appliance as a refrigerator (1) having a refrigeration compartment accessed by a rotatable flap (2) connected to the inner wall of the refrigeration compartment by a flap connection portion. The present invention more particularly relates to a refrigerator (1) having an interior refrigeration cabin enclosed by a heat-insulating housing and a refrigeration cabin door, the refrigeration cabin comprising at least one storage division having a flap (2) closing the outer side thereof, the flap (2) in mechanical communication with two flap operating portions (3) is hingedly operated in open and closed positions by rotational movement relative to the flap operating portions (3).
