Abstract (en)

[origin: WO2016156297A1] The invention relates to an Internet-enabled communication system (1) which has a central computing unit (ZR) and decentralized computing units (DZR1,....., DZRn) and to which communication terminals (T1,....., Tm) can be connected. The invention provides for a plurality of communication connections to be established via the central computing unit (ZR), in particular for carrying out reservation tasks. The decentralized computing units (DZR1,....., DZRn) are each connected to at least one first data storage medium reader (DZ1 -L,....., DZRn-L) which is used to read data storage media (DT1,....., DTm) each assigned to a communication terminal (T1,....., Tm).
