Abstract (en)
[origin: EP3280085A1] A communication device for handling a HARQ RTT Timer comprises a storage device for storing instructions and a processing circuit coupled to the storage device. The processing circuit is configured to execute the instructions stored in the storage device. The instructions comprise receiving a first DCI on a DL control channel transmitted by a BS, or being configured a configured DL assignment; and starting a HARQ RTT Timer for the HARQ process, wherein the HARQ RTT Timer counts a time duration from a (n+1)-th TTI to a (n+k+N +3+deltaPDCCH)-th TTI.
