Abstract (en)

[origin: WO2016162152A1] Porous support (5) for growing an organism (11), comprising two walls (4, 4') capable of holding water, the two walls being designed to form at least one pocket (31) for holding the organism (11), characterized in that each wall (4, 4') comprises at least one porous layer (1) comprising a chemically inert and porous material allowing water to flow under the effect of gravity through the pores of the layer (1), the said layer being designed to allow the organism to cling on to it.
