Abstract (en)
[origin: WO2017001139A1] The invention relates to an arrangement (1) for a turbine comprising a metallic support structure having at least one radial support strut (3, 4, 5) and a multiplicity of plate-shaped, fiber-reinforced ceramic segments (6) which are arranged one on top of the other on the support structure and together define the circumferential contour, the segments (6) being provided with through-openings (12) through which the at least one support strut (3, 4, 5) extends, wherein the at least one support strut (3, 4, 5) has outwardly-extending projections (9) that extend perpendicular to the radial direction and engage in corresponding recesses (13) formed in the segments (6).
